TECHNICAL SKILLS

Languages: Python [Advanced], C++ [Intermediate]

Frontend: React.js, HTML5, CSS3, Tailwind CSS, DaisyUI

Backend: Node.js, Express.js

Databases: MongoDB, Cloudinary (file storage)

Tools / Frameworks / Libraries / Version Control / API Technologies: Zustand, Razorpay API, Leaflet.js, Motion (Framer), Mailtrap, Git & GitHub, Streamlit, Vercel, Netlify, Render, Nodemailer

PERSONAL STATEMENT

I am a second-year engineering student specializing in full-stack web development, with a strong foundation in MERN stack and growing expertise in AI/ML integration for web applications. My technical strengths lie in building secure, scalable backend systems and creating modern, responsive UIs with an emphasis on user experience.

Previously, I contributed to projects like **SafeSpace** — a secure incident reporting platform aligned with UN Sustainable Development Goals — where I developed backend APIs, integrated AI-generated reports, and implemented anonymity features to enhance user trust.

I am seeking an internship to apply my skills in real-world product development, collaborate with experienced engineers, and further specialize in AI-powered web applications and system optimization.

PROJECTS

SafeSpace AI | [GitHub](#)

April 2025 – May 2025

Built a full-stack incident reporting platform enabling users to submit complaints anonymously and receive AI-generated case reports.

- **Tech Stack:** React.js, Tailwind CSS, Flask, Express, MongoDB, Cloudinary, Google reCAPTCHA.
- **Problem Solved:** Provided a safe, anonymous, and tech-driven solution for reporting incidents in line with UN SDGs (gender equality, peace, justice).
- **Challenges Tackled:** Securing user identity data, implementing CAPTCHA to prevent spam, and optimizing AI prompt engineering for better contextual output.

LockerLink | [GitHub](#)

July 2025 – July 2025

Built a role-based system for users, admins, and agents to manage locker-based deliveries.

- **Tech Stack:** React.js, Tailwind CSS, MongoDB, Express Leaflet.js (maps).
- **Problem Solved:** Provided a safe, anonymous, and tech-driven solution for reporting incidents in line with UN SDGs (gender equality, peace, justice).
- **Learning Outcome:** Implemented real-time status updates, locker assignment logic, and minimal UI for quick adoption.

Developed end-to-end crowdfunding flows — campaign creation, donations, withdrawals — with real-time badge/achievement system and celebratory modals.

- **Tech Stack:** MongoDB, Express, React, Node.js, Zustand for state, TailwindCSS for UI, Razorpay for payments, JWT auth, Axios; lucide-react, react-confetti, react-toastify for UX polish.
- **Problem Solved:** Enabled transparent progress tracking, wallet management, and gamified engagement, supporting startups, community projects, and personal fundraisers.
- **Challenges Tackled:** Resolved modal timing/navigation conflicts, optimized Zustand action patterns, and implemented robust backend badge evaluation with resilient UI.

EDUCATION ENROLLMENT

Kalvium's UG program in CS (Software Product Engineering)

2024-28

Campus: Jalandhar | Bachelor's enrollment: B.Tech CSE, Lovely Professional University

ACHIEVEMENTS & EXTRACURRICULARS

- **Hackathons & Competitions:** GNEC Hackathon 2025 | TuteDude Web Hackathon
- **Leadership:** Served as Team Leader in Hackathons, driving project execution and team coordination.
- **Personal Interests:** Enjoy solving Sudoku, and playing badminton and basketball in free time.

CERTIFICATIONS

- **Frontend Developer (React)** - [Certificate](#)
- **Software Engineer Intern** - [Certificate](#)
- **Rest API (Intermediate)** - [Certificate](#)
- **Google Cloud** - [Certificates](#)
